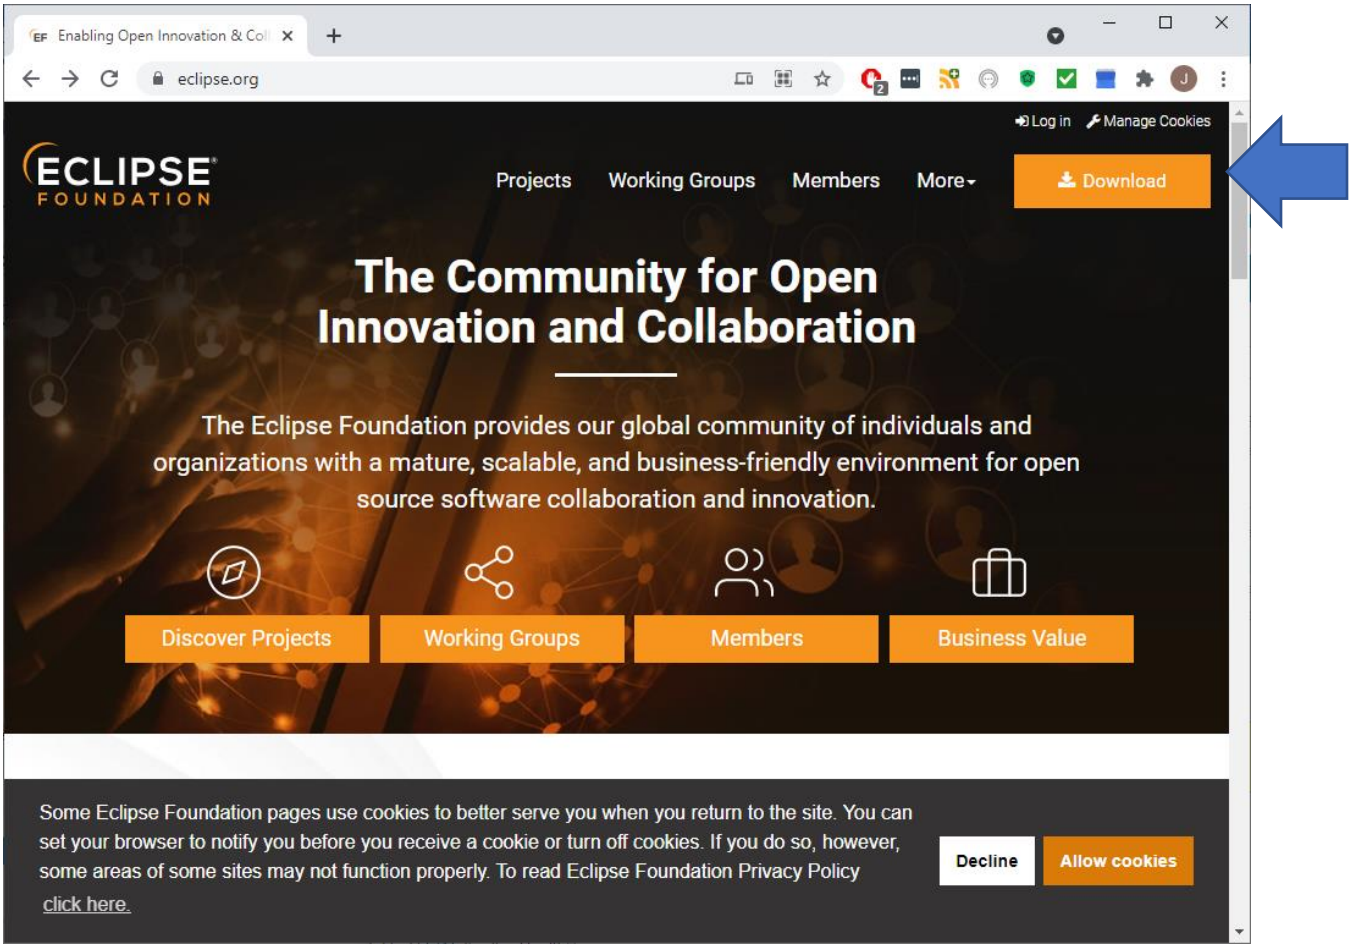
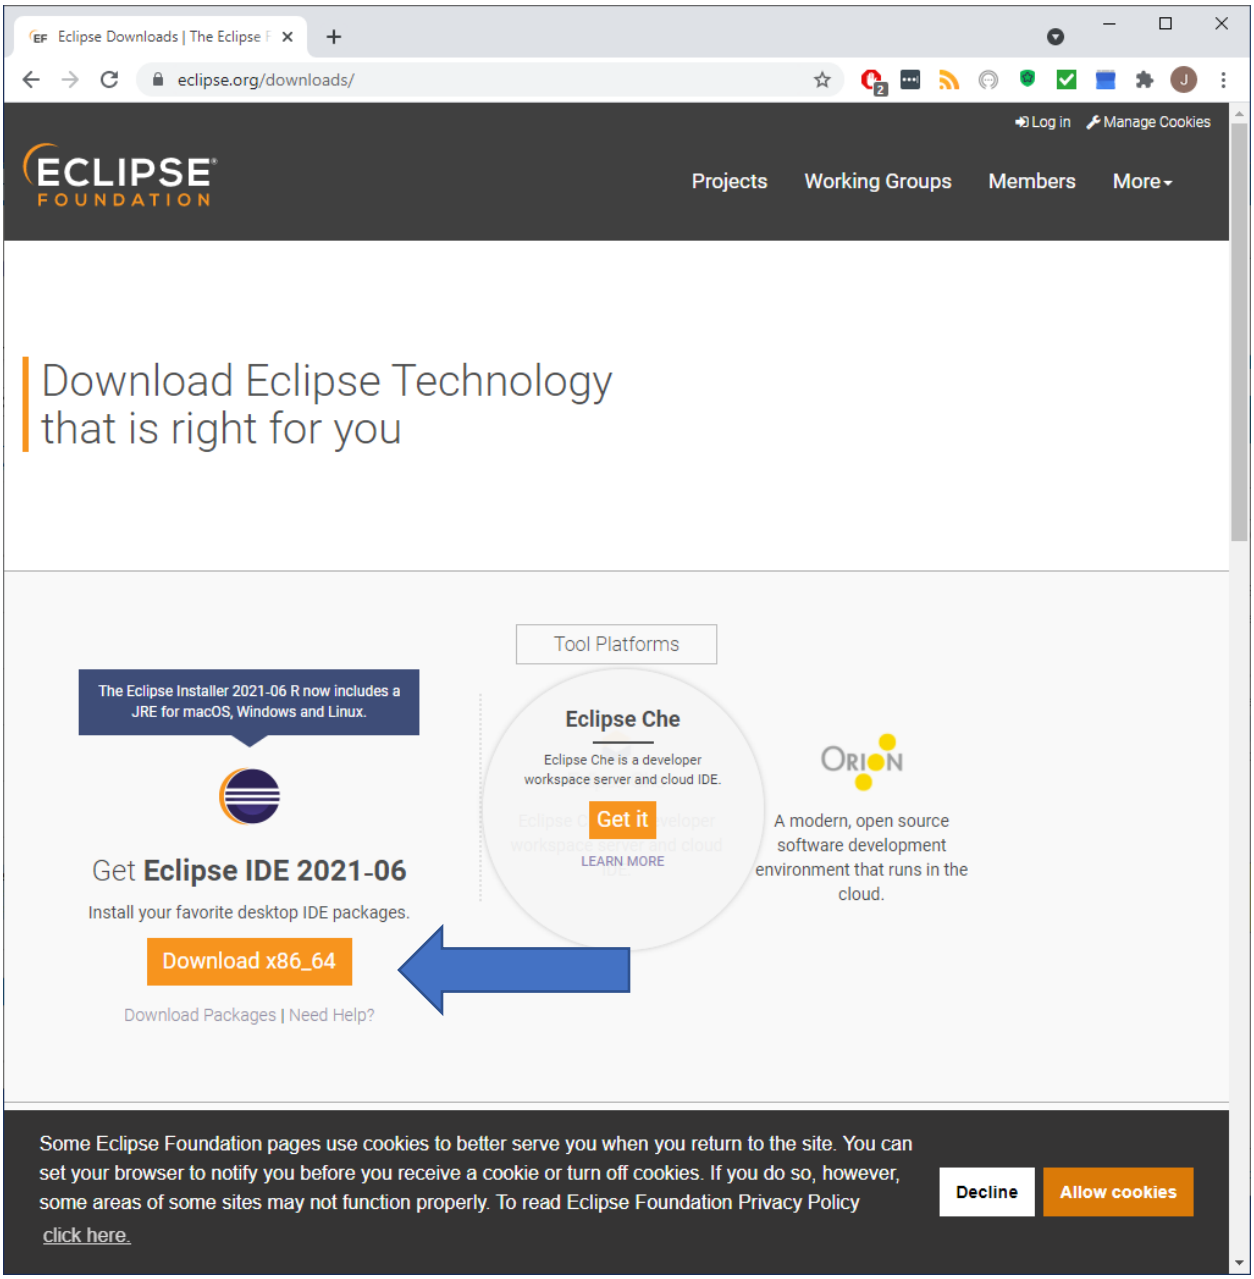
Installing Eclipse on Windows

We will be using the Eclipse IDE (Integrated Development Environment) in the COSC 180 Class. Following are the Directions for installing the Eclipse on your local machine.

Go to www.eclipse.org – you will be confronted with a window that looks like this; click on the download symbol.

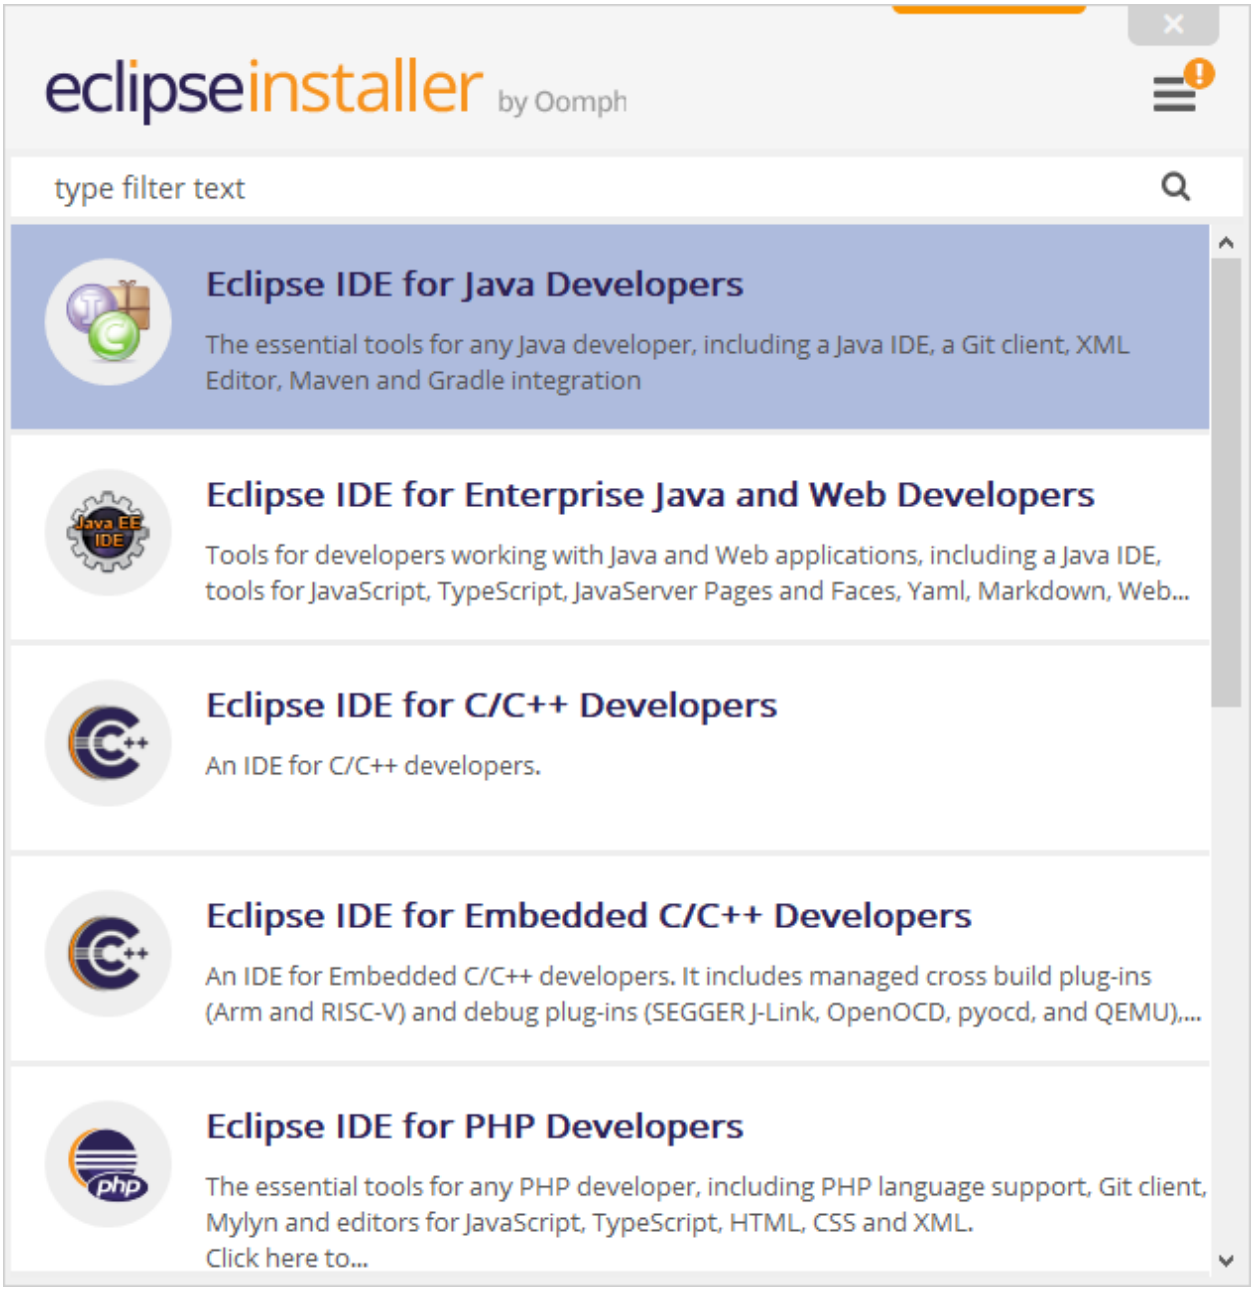


You will then be taken to another page on which you will click the “Download_X86_64” button.

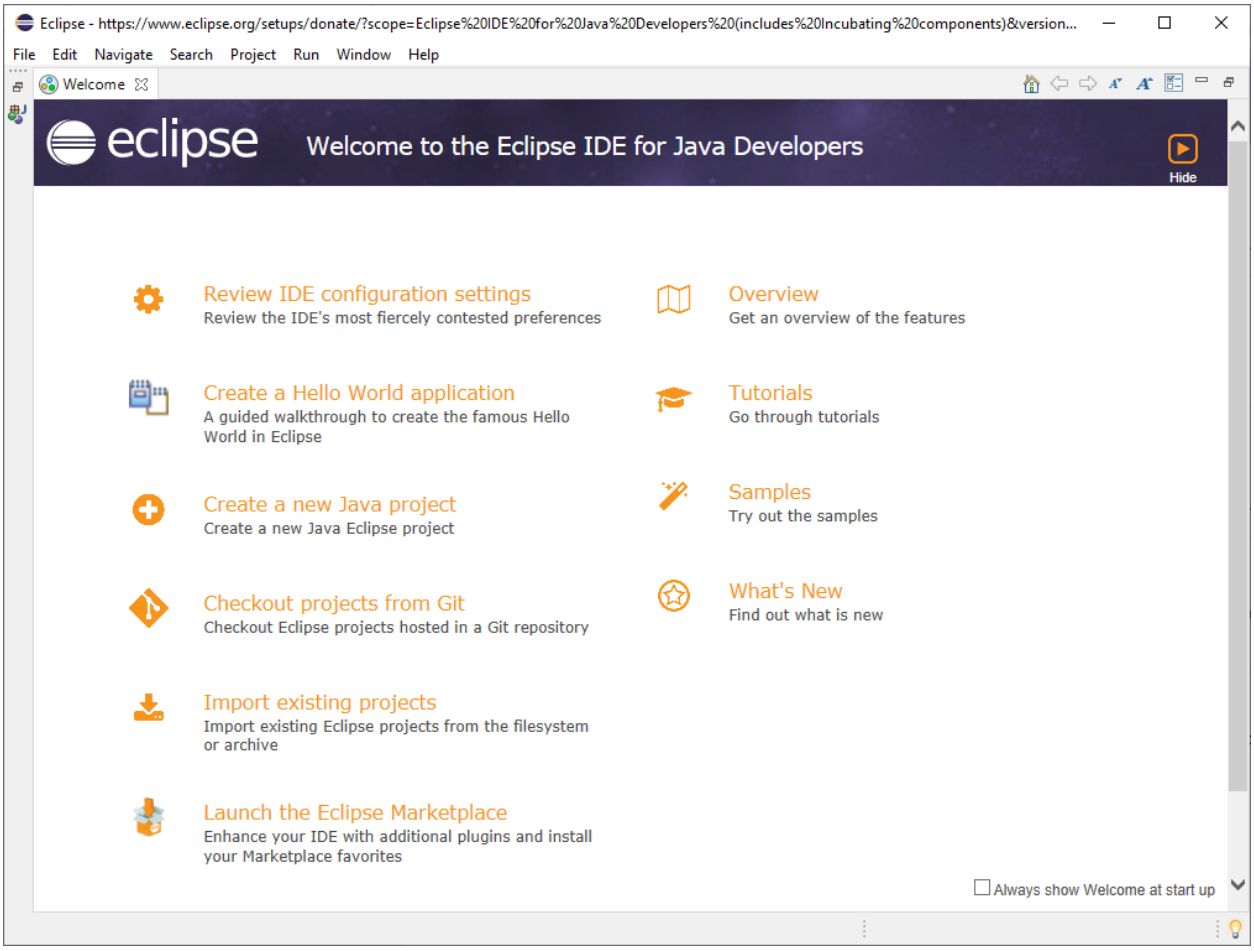


Clicking on the indicate button will download an installer for you. The installer will download bother the Eclipse IDE and a JRE (Java Runtime Environment).

You should now run the installer on your machine; you should install the Eclipse IDE for Java Developers.



Just accept the defaults after this – this should install both eclipse and the JRE in appropriate locations. After installation you should see a page that looks like this:



Eclipse - https://www.eclipse.org/setups/donate/?scope=Eclipse%20IDE%20for%20Java%20Developers%20(includes%20Incubating%20components)&version...
File Edit Navigate Search Project Run Window Help
